

On-Site Wastewater Treatment System Engineering, Consulting, and Permitting Services

Commercial developments in NJ with projected on-site sanitary wastewater discharges exceeding 2,000 gallons per day (gpd) or typical restaurant, convenience store and similar facilities that produce high-strength wastes require much more than just a conventional septic system and local municipality permitting.

Whitestone Associates, Inc. specializes in all aspects of Wastewater Treatment System (WWTs) engineering including site evaluation (infiltration testing, seasonal high groundwater determination, and groundwater modeling), WWTs feasibility analysis (assessment of conventional and innovative technologies for treatment and discharge), permitting (NJPDES, TWA, WQMP, and local/county approvals and permits), and construction phase inspection.

In addition, Whitestone has extensive experience with the evaluation of failed or poorly operating sanitary waste management systems and using advanced technologies to mitigate site constraints such as dimensional limitations or shallow groundwater.

Whitestone's WWTs Services:

- Site and WWTs feasibility evaluations
- Wastewater characterization analysis
- Design/permitting of WWTs
- Existing WWTs evaluation
- Forensic investigations of failed WWTs
- Construction oversight and inspection

Representative Projects:

Examples of commercial WWTs projects Whitestone has completed include (please click on the links below for more information):

- [Convenience Store/Gas Station, Millstone, NJ](#)
- [Retail Redevelopment, Somerset, NJ](#)
- [Warehouse/Office, Roxbury Township, NJ](#)
